

Summary of Changes to Florida SHOTS Release 2019.0.4

Changes made since the last major release (Release 2018.3.2, deployed 3/15/19):

- New vaccine type “VAXELIS” (CVX 146, CPT 90697) added in anticipation of future product availability. MFG is Sanofi. Protects against DTaP, IPV, Hib, and Hep B.

Changes made with the current release:

- Ability to document “vaccine education encounters” as they relate to issuing religious exemptions for CHD users. The “Patients” section of the main menu updated to have the “Religious Exemption” function and the new “Vaccine Education” function listed together. Encounters are simple notations that vaccine education was provided, who received the education, who gave it, and when.
- NDC, mfg, and lot number for vaccinations will be sent in response to HL7 “QBP” web service queries if available.
- Contact attempts will no longer be cleared when vaccinations are recorded (only cleared when current immunization provider is changed).

Please contact the helpdesk if you have further questions and don’t forget the “help text” on the top-right of every page for tips. If your question is specific to VFC vaccine, ordering, or temperature logging, please contact the VFC program office.

For training and more on how to use Florida SHOTS, please see the “Customer Support” section of the main system menu or via resources available at www.flshotsusers.com. Questions? Comments? Please contact the Helpdesk at 1-877-888-7468.
